In the branch of mathematics known as complex analysis, a complex logarithm is an analogue for nonzero complex numbers of the logarithm of a positive real number. The term refers to one of the following: a complex logarithm of a nonzero complex number z , defined to be any complex number w for which $e^w = z$. Such a number w is denoted by $\log z$. If z is given in polar form as $z = re^{i\theta}$, where $r > 0$...
