Enzymes are a special class of proteins. In the absence of the enzyme, the chemical reactions of digestion would occur at such a slow rate, the body would essentially starve to death. The digestive system would take about 50 years to process just one meal, if it did not have the needed enzymes to speed up the process.

eScience Labs collaborates with hundreds of higher education institutions to provide a traditional hands-on laboratory experience to students engaged in online and blended learning. Through a combination of hands-on science lab kits, virtual learning tools and customized digital curriculum, eScience Labs helps higher education institutions expand and strengthen science comprehension.

Why eScience Labs | eScience Labs

This and salt concentration also affect enzymatic structures. As a result, enzymes denature at extremes of pH and high salt concentrations. In addition, substrates and/or the enzyme's active site groups may become ionized. This further affects the enzyme-substrate binding. Again the pH at which an enzyme works best is called its optimal pH.

Introduction. Enzymes catalyze reactions by lowering the activation energy necessary for a reaction to occur. In this laboratory, you will study some of the basic principles of molecular movement in solution and perform a series of activities to investigate these processes. NOTE: To make the most out of your LabBench experience, review the LabBench Tips.
