General Chemistry Atoms First Mcmurry

Organic chemistry is study of carbon compounds. Why is it so special? 90% of more than 30 million chemical compounds contain carbon. Examination of carbon in periodic chart answers some of these questions. Carbon is group 4A element, it can share 4 valence electrons and form 4 covalent bonds. Origins of Organic Chemistry Review ideas from general chemistry: atoms, bonds,

Chapter 1 Structure and Bonding - Chemistry

It is a general principle in chemistry that the more a charge is dispersed, the more stable is the species carrying the charge. Put simply, a species in which a positive charge is shared between two atoms would be more stable than a similar species in which the charge is borne wholly by a single atom.
