Hard water causes scale to accumulate in pipe systems and equipment. This water hardness, scale build-up comes at a significant cost. Scale buildup compromises energy-efficiency. For example, in water heating and cooling systems, an eighth of an inch of scale buildup results in a 20 percent loss of efficiency.

Water Hardness Map | HydroFLOW USA

Unfortunately, the Copenhagen report did not talk about water pollution, but water consumption. So let's start with that. In 2015, according to the report, the global fashion industry consumed 79 billion cubic meters of water, which is an enormous amount, more than electricity production (according to 2008 numbers), and is threatened by water ...

Why Fashion Isn't the Second Most Polluting Industry After Oil

Fashion Revolution Week (19-25 April) is an annual event, now in its eighth year, that commemorates the Rana Plaza factory collapse in 2013, which killed 1,134 people in Dhaka District, Bangladesh. For this year's event, the University will host a series of events that look at the impact of the fashion industry supply chain in relation to ...

It's time for a fashion revolution to tackle plastic pollution

As water is denser than oil, the latter floats when discharged in a water body. It forms a skimming layer over the water surface and therefore it is comparatively easier to decant oil from the sea than other chemical pollutants. Different methods of cleaning sea after an oil spill are briefed as under: 1. Oil Booms
